

**CO<sub>2</sub> capture, storage and re-use**  
**A solution for the future**

[Home](#) >> Home

## **Edito-en**

The fight against climate change, due to a major rise in our CO<sub>2</sub> emissions since the 19<sup>th</sup> century, is an unprecedented challenge for our society.

The Carbon Capture, Use and Storage (CCUS) is a rising technology which, applied jointly with other mitigation solutions, could ultimately greatly reduce the amount of CO<sub>2</sub> emitted by heavy industries and power plants.

This website serves two purposes: it provides clear information to the general public about the ins and outs of this new technology, and also acts as a platform to the main players of the field who wish to stay up to date on the latest news and advances made in research or French pilot operations.
